Native iOS and Android engineer with nearly 6 years of experience building mobile applications for both internal teams and external clients at Goldman Sachs. Collaborative team player with strong interpersonal skills and experience working with cross-functional teams, always looking to learn from different perspectives and improve to build better products.

SKILLS

- **Languages & Frameworks**
 - **iOS:** Swift, SwiftUI, Swift Charts, Swift Concurrency, Combine, UIKit
 - **Android:** Kotlin, Jetpack Compose, Kotlin Coroutines, Kotlin Flow, ViewModel
 - **Architecture:** MVVM, Clean Architecture principles, Cross-Platform State Management
- **Tools & Platforms:** Xcode, Android Studio, Git, Gitlab, CI/CD pipelines, Jira, REST APIs, WebSockets, JSON parsing, App Deployment, Activity Tracking for analytics, LaunchDarkly for feature flag management, Copilot AI
- **Testing:** Unit testing, UI and End-to-End testing using Perfecto
- **Leadership & Collaboration:** Cross-platform (iOS ↔ Android) collaboration, Cross-team integration with shared frameworks, Close collaboration with Product, Design, & Backend teams, Mentoring & onboarding

EXPERIENCE

Goldman Sachs

New York, NY

Mobile Software Engineer (Android)

July 2025 - Nov 2025

- Contributed to unifying GS Now and Marquee Trader apps into a single GS Marquee mobile platform, ensuring feature parity across iOS and Android
- Implemented platform-wide Unified Search, aggregating and ranking results across multiple backend services
- Modernized legacy Android features using Kotlin, Jetpack Compose, Coroutine, and Flows.
- Play a central role in rebuilding key modules including real-time Market Data dashboard with streaming updates and Research and media content platform

Mobile Software Engineer (iOS)

Jan 2020 - July 2025

- Real-Time Market Analytics & Data Infrastructure
 - Owned development of real-time market data dashboard for market insights across multiple asset classes
 - Built a table with bi-directional scrolling optimized for large streaming datasets, which was designed for scalability and performance under high-volume market data conditions
 - Integrated WebSocket-driven real-time data into the dashboard to support sorting, filtering, pinning, search, and time-range performance comparisons
- Platform-Wide Search & Discovery
 - Played a central role in building app wide unified search. A cross-product discovery system spanning market data, research content, and structured products.
 - Aggregated and ranked results across multiple backend services with coordinated API orchestration
 - Integrated AI semantic search to enhance discoverability and engagement for users
- Cross-Platform State & Architecture
 - Implemented shared cross-platform state for bookmarks and user preferences
 - Contributed to unifying GS Now and Marquee Trader into GS Marquee across iOS and Android
 - Modularized the app into scalable feature packages, implemented a new navigation system, and modernized and refactored legacy code using SwiftUI and Swift Concurrency.
- Analytics & Pre-Trade Visualization
 - Implemented components for Visual Structuring, a multi-award-winning and patented cross-asset derivatives platform, including interactive scenario-based payoff visualizations.
 - Built charts using Swift Charts to visualize derivatives outcomes across multiple market scenarios
- Earlier Contributions
 - Supported development of research, media, and market content features in the GS Now app
 - Assisted with building FX trading workflows including real-time pricing and full order lifecycle management

EDUCATION

Pursuit iOS Development Fellow (9% acceptance rate) | Long Island City, NY
CUNY Brooklyn College | B.A. Speech-Language Pathology & Psychology

Oct 2018 – Jul 2019
Jun 2014
